

Appendices Guide

PST 315: Methods of Policy Analysis and Presentation

Prof. Jack Reilly

F2026

Your Appendices section will contain Appendix I, II, III, and depending on your project, Appendix IV and V. If you do not have disaggregated graphs or open-ended responses, take out Appendix IV or V from the Table of Contents as necessary.

Note

Appendices are very customized to each individual project. Be sure to discuss with your UCA what your appendices might look like specific to your project.

About these examples

The examples below use **sample data**. Skills Win Coaching Organization is a real Syracuse University program, but the survey, responses, and numbers shown here are invented for teaching purposes and are not actual SWCO results.

Appendix I – Research Questions

Appendix I shows the questions you are aiming to answer through your project. If you conducted a survey, this section will contain screenshots of your survey. If your project is related to data collection or analysis, you will paste your research questions into this section.

If your project is a survey, take a screenshot of your survey (whether it's a paper survey or digital survey) and insert your screenshot(s) into Appendix I. Make sure your screenshot includes all questions asked in your survey.

If your project is not a survey, directly paste your research questions into Appendix I, like this:

1. How helpful did students find the site session coaches?
2. How engaging did students find the site session exercises?

3. Did student views on the exercises differ by site?
4. What do students feel could be improved about the site sessions?
5. How many sessions did students attend over the semester?
6. Would students recommend the site sessions to a friend?
7. Which session topics did students find most useful?

Appendix II – Data Frequencies

Appendix II shows the number (or percentage) of times a specific response or category appears within your dataset. In effect, it is a list of frequency tables for each variable analyzed in your report.

Data frequencies for a survey question:

The coaches were helpful.

Response	Number	Percentage
Strongly agree	89	42%
Agree	63	29%
Neutral	44	21%
Disagree	12	6%
Strongly disagree	5	2%
No response	1	<1%

Data frequencies for a data-collection project might look like:

Sessions delivered by site, Fall 2026

Category	Number	Percentage
Site A	14	39%
Site B	12	33%
Site C	10	28%

Appendix III – Codebook and Spreadsheet

Appendix III is your Codebook and Spreadsheet. Your spreadsheet must contain your coded data (not the raw data). If your spreadsheet contains open-ended responses, leave the open-ended responses as is. See the [Codebook and Spreadsheet Guide](#) for how to build both.

Column	Field Name	Definition	Code
A	ID	Respondent's unique identification number	Code is identical to identification number
B	SITE	Which site session did you attend?	1 = Site A ...
C	GRADE	What grade are you in?	1 = 9th ...
D	COACH	The coaches were helpful.	1 = Strongly disagree ...
E	ENGAGE	The exercises were engaging.	1 = Strongly disagree ...
F	IMPROVE	What could be improved at your site sessions?	Open ended response: ...

ID	SITE	GRADE	COACH	ENGAGE	IMPROVE
1	1	3	5	4	1
2	2	4	4	5	2
3	1	2	3	3	1
4	3	4	5	2	3

Appendix IV – Open-Ended Responses

You will only have Appendix IV if you have open-ended questions in your survey. In this section, you will copy open-ended responses and paste them into the section. Do not correct any spelling or grammatical errors – the responses should be copied as they were originally written. See the [Qualitative Coding Guide](#).

What could be improved at your site sessions?

More activities (n=8)

1. More hands on activities would be good.
2. add more group activities
3. More activities like the resume one.
4. i liked the practice interviews, do more of those

More time (n=6)

1. The sessions felt rushed at the end.
2. more time for each activity

3. Longer sessions.
4. We needed more time to finish.

Smaller groups (n=4)

1. The groups were too big.
2. smaller groups so everyone can talk
3. Too many people at my table.
4. Smaller groups would help.

Better materials (n=3)

1. The handouts were hard to read.
2. better worksheets
3. The packet had typos in it.

Nothing (n=2)

1. Nothing, it was great.
2. nothing

Appendix V – Disaggregated Graphs

You will only have Appendix V if your responses require disaggregated graphs.

Disaggregated graphs are used when you need to display how different subgroups within a population perform or behave. For example, disaggregating test scores by gender, age, or ethnicity to reveal patterns that may not be apparent when the data is aggregated.

Paste your disaggregated graphs into Appendix V with a source below each graph.
